## (54) DEVICE FOR DISPLAYING INFORMATION WITHIN VIEWFINDER

## (57)Abstract:

PURPOSE: To enable both first and second information to be observed together with a finder image by providing an optical member into which the second information is introduced with such an optical characteristic that those beams of light of the first information which have a predetermined spectral characteristic are prevented from impinging on the second information.

CONSTITUTION: A light-emitting diode 8 is turned on to display first information 6c on a finder image on a focusing screen 6 and is observed together with the finder image. Second information 2 is displayed around a finder viewing field and observed together with the finder image. At the same time, the light-emitting diode 8 is turned on to allow observation of both the first information 6c and the second information 2 together with the finder image. The optical characteristic of an optical member 1 is such that no ghost is produced by the incidence on the second information of noise rays derived from beams of light from the light-emitting diode 8, thus allowing the second information to be observed well. Therefore, both information can be observed well, together with the finder image.

## LEGAL STATUS

- [Date of request for examination]
- [Date of sending the examiner's decision of rejection]
- [Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]
- [Date of final disposal for application]
- [Patent number]
- [Date of registration]
- [Number of appeal against examiner's decision of rejection]
- [Date of requesting appeal against examiner's decision of rejection]
- [Date of extinction of right]
